Build your estimating expertise
and learn how to utilize the
OEM repair procedures to document
a safe and proper repair

March 14, 2026
8:00 am to 4:00 pm
\$75 non-members
\$50 OKABA members

Taught by

Jeff Oldenettel
Collision Advice
Facilitator

Location

Hilton Garden Inn
328 East Sheridan Ave
Oklahoma City, OK 73104

Learn how to use the OEM repair procedures to build a bullet-proof repair plan

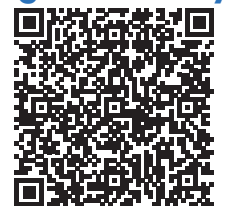

The goal of repair planning is to write a thorough damage analysis based on the OEM repair procedures. In this course, all attendees will learn a proven approach to writing a safe and proper repair plan, including conducting OE safety inspections, steering column inspections, seat belt inspections and more. Attendees will also learn how to research and identify damage and document the damage in a way that will assist you in discussions with third-party payers, as well as reduce liability. Attendees will also learn proven techniques for justifying repair operations, part type selection and refinish operations.

In addition, we'll discuss:

- Key considerations when replacing specific components, such as non-reusable parts, adjacent panel damage, and more
- How to create a repair plan based on OEM repair procedures
- How to present a bullet proof file for reimbursement of Pre- and post-repair scans
- How to analyze exterior and structural damage, including the types of materials used in today's vehicles and their repair limitations

Attend both this event and the Friday event for additional savings!
